

ROW MULTIPLIER

Product Introduction

- By transition chain biscuit transferred to Row Multiplier, the machine will be evenly distributed 2-4-6 lane biscuit into 4-6-8-12-16 or 24 lane of transport,
- Row Multiplier and sandwich machine host synchronous operation to ensure the accuracy of its location;
- All allocation slider with food grade materials to meet food hygiene requirements.
- Row Multiplier configuration stacker, the vertical transport of biscuits after finishing;

This is the most ideal design scheme, provide professional customization from biscuit rejoining or shunting transport after biscuit oven, to merging or row multiplier transport, vibration transport, and various types of automatic loaders, to realize the semi-automatic and fully-automatic production of biscuits, minimize loss and secondary pollution in the process of transport and turnover of products and improve production efficiency.

Various product processing solutions can be design according to different operating procedures, including:

- Automatically connected to the sandwiching machine
- Stacking loader
- Length measuring loader
- Counting loader
- On-line pallet loading system
