

SERVO PILLOW PACKAGING MACHINE

Product Introduction

Standard functions

- Single or multiple servo motors and PLC, etc. constitute control and drive core, with higher control accuracy and reliability;
- More precise temperature control system, with bag forming and length cutting;
- Double drive longitudinal sealing and advanced longitudinal sealing heating technology can better protect packaging film;
- Formula type modular design;
- Automatic monitoring and self-diagnosis for the reasons for and solutions to the faults occurred In the running process of packaging machine.

Options:

- It can match with stacking feeder;
- Its downstream can match with horizontal boxing machine.

Servo pillow type packaging machine can automatically complete tubular film bag making, wrapping, sealing and cutting. Suitable for high-speed continuous packaging of single article or several articles with fixed shape. This type of packaging machine has high production efficiency, low noise, stable performance and beautiful product packaging. Suitable for packaging of instant noodles, bread, biscuits, cookies, wafer, bottled lactic acid beverage and frozen food, etc; it is also suitable for packaging of medicines, infusion bags, medicine boards, cosmetics, soaps, daily necessities and industrial components.
